

How It Works

Go from idea to production in four simple steps.

1. **Connect** — Link your codebase, documents, and tools in one secure workspace.
2. **Retrieve** — The AI instantly finds the most relevant code, docs, or data you need.
3. **Generate** — Create, refactor, or document code with context from your own sources.
4. **Execute** — Test in the sandbox, then push commits, open PRs, or deploy directly.
